

The folder PE\_CppFunctions contains a Microsoft Visual Studio 2008 C++ / XLW 4.0 / Boost 1.46.1 project that was used to create the C++ engine for Performance Evaluation Tool. The Excel add-in PE\_CppFunctions.XLL in the final product is the renamed PE\_CppFunctions/Debug/Template.xll.

You can see the C++ source files in PE\_CppFunctions /source (they can be opened with Notepad or a similar editor). If you have Visual Studio, open the file PE\_CppFunctions /Template that has type "Microsoft Visual Studio Solution". To rebuild the project, keep in mind that it is dependent on XLW 4.0 and Boost 1.46.1.
